

Utensil store Management System:-

A Utensil Management system is a system where all the process that are being executed at utensil shop can be managed having following details as follows: uten_id, uten_name, uten_type(copper/steel/silver), uten_care(soap wash / only water wash), uten_price, uten_exchange_avail(yes/no), uten_disc(yes/no), pur_date, person purchasing the utensils as follows p_id, p_name, p_address, p_contactno Here a small part of implementation has to be done which are as:-

Specific task Group Member-1

- 1) List all the utensils alphabetically which are made of steel and whose price is greater than 500 and can be exchanged later on.
- 2) List all the person with their address and contact numbers who purchase silver utensils today.

Specific task Group Member-2

- 3) Display all the persons who purchased atleast 5 utensils in this month along with their telephone numbers and address.
- 4) Display names of all those utensils which are washed using soap and are priced between 100 to 1000.

Specific task Group Member-3

- 5) Display the name of utensils for which discount of atleast 25% is available and are of type copper.
- 6) Display the list of all utensils which are bought by our regular customer 'Mr Mukesh' in this month and are having price greater than 700.
