

## Clothing Management System

A Clothing Management system is a system where all the details of the clothes like cloth\_id, cloth\_type(cotton/ nylon/silk), cloth\_description, cloth\_category(trouser/ shirt/ scarf/ saree/ skirt, etc), cloth\_price, cloth\_stock\_availability, cloth\_gender\_type, sales\_percentage\_margin. Here a small part of implementation has to be done which are as:-

Create a class called clothing\_mgmt with above attributes and store the database for 10 customers.

### Specific task Group Member-1

1. Display all the clothes whose cloth type is 'cotton'
2. Display all the clothes whose cloth description contains 'available in pieces'
3. Display all the clothes whose price is less than 500/-

### Specific task Group Member-2

4. Display all the clothes description whose sales tax percentage margin is between 10% to 25%.
5. Display all the details of the clothes whose cloth category is 'trouser'.
6. Display all the clothes sorted according to gender type.

### Specific task Group Member-3

7. Display all the clothes which belong to category shirts.
8. Display all the clothes whose cloth type is silk as well as cloth category is saree.
